

9/26/2023

Dear ICP Client,

I am writing to inform you that ICP fees will change on January 1, 2024.

In the past six years, ICP program expenses for resources, development, and services have significantly increased. During this time, API maintained the program's existing fee structure to avoid amplifying the negative impacts of the global pandemic. As a result, API has adjusted prices to uphold a fair overall cost for candidates.

The ICP program, along with the industry it supports, continues to evolve to meet current and future demands. Many of the changes necessary to support our industry and community have already begun. Some of the areas on which we have focused include:

- Enhancing certificant user experience by establishing a robust contact center management system that provides an omnichannel presence to service client needs.
- Improving the ICP portal to streamline the application process and to create a Continuing Professional Development tracking system.
- Expanding program offerings including the new API 1184 for Inspection of New Facilities and the API 982 for Refractory Inspectors to be released in 2024.
- Increasing recognition and value of certifications through the ANSI/ANAB accreditation of the API 510, 570, and 653 offerings.

While this list is not exhaustive, it does show API's ongoing commitment to develop and deliver world-class programs that support the global oil and natural gas industry and certificate holders.

The new fee structure can be found at www.api.org/ICP.

Best,

Andri Orphanides,
Director of Individual Certification Program (ICP)
