

ENERGY IS...

# ALASKA

## KING SALMON IS KING!

### FISHING LINE:

Thermoplastics made with natural gas and petroleum molecules for strength and durability.

**EQUIPMENT:** Waterproof clothing, knife handles, fish bonkers, nets, gloves and more — all made with components derived from petroleum.

**ROD:** Carbon fibers made from petroleum, or fiberglass made with natural gas.

### WADERS/ BOOTS:

Polyurethane/nylon (Gore-Tex), PVC — all made from petroleum.

## Energy is Everything.

In virtually every human activity and invention, energy plays an important role: powering, building and improving the quality of everyday life.

### Salmon fishing illustrates this point.

Materials derived from petroleum make fishing rods and fishing line that are strong and durable enough to pull in a salmon that could weigh 50 pounds or more. Thanks to equipment made from natural gas and oil, fishing for tasty salmon is more efficient and more effective -- benefiting all of us who love to see salmon on our plates.

### QUICK FACTS:

- For 2015, state officials report an overall salmon catch of more than **3 million**. Coho or silver salmon topped all others with **1,144,544** caught.
- King ("Chinook") salmon typically weigh **30 pounds** or more.
- Summer in Alaska means **19 hours** of sunlight on the Kenai Peninsula -- plenty of daylight for your regular job and several hours of fishing.

## ON THE ISSUES

### ACCESS

**Bill Walker**  
Governor

“With the trans-Alaska pipeline three-quarters empty, we must spur more oil production. When Alaska became a state, the federal government mandated that we live off of our resources – but we must be able to access them.”

### ACCESS

**Dan Sullivan**  
U.S. Senator

“Because energy can be used as a tool for power and diplomacy, developing Alaska’s abundant reserves would also strengthen our national security. I’ll do everything I can in this next Congress to work with my colleagues and the new administration to at long last allow our state to finally realize its full potential.”
